Text Parser -> Parses a txt file removing the whitespace and replacing the 'Special Character' with a ',' comma. Prints to terminal. Copy and paste said terminal to create a CSV file.
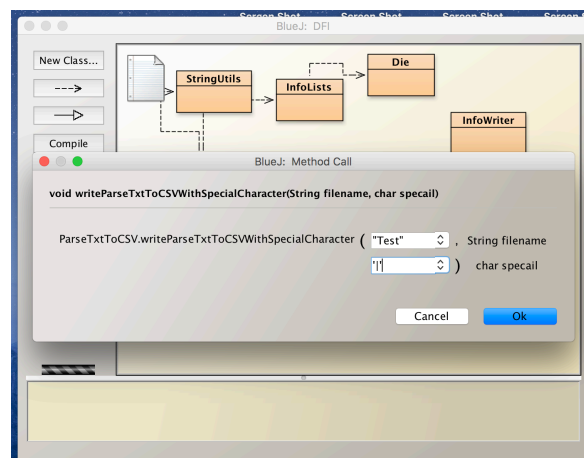

Directions:

Find the BlueJ package in ParseFile/
Place you .txt file in the INFO Folder

Click on highlighted Method to start process

Enter file name with "" double quotes it IS CASE SENSITIVE
Enter special Charicter with '|' single quotes and only enter one char or you will get errors

Output in terminal
Copy and paste into a text editor and save file as CSV then open in Excel
NOTES:
- USES UTF-8 Character set
- Having commas in txt will create new column when in CSV format
